

WESTCORE FLEXIBLE INCOME FUND

FACT SHEET | September 30, 2017

FUND INFORMATION

Class	Retail	Institutional
Ticker	WTLTX	WILTX
Cusip	957904709	957904519
Fund Inception	6/1/1988	9/28/2007
Strategy Inception	10/1/2000	

Also available in SMA and separate account vehicles offered by Denver Investments.

This Fund is subject to additional risk in that it may invest in high-yield/high-risk bonds and will be subject to greater levels of liquidity risk. Additionally, investing in bond funds entails interest rate risk and credit risk.

¹Performance data quoted represents past performance and does not guarantee future results. Performance information for the institutional class shares prior to their inception is based on the performance of the retail class. Current performance may be lower or higher than the performance quoted. To obtain current performance as of the most recent month-end, visit www.westcore.com. Average annual total returns reflect the reinvestment of dividends, capital gains distributions, all fee waivers and expense reimbursements. Without the fee waivers and expense reimbursements, total return figures would have been lower. Investment return and principal value will vary, and shares, when redeemed, may be worth more or less than their original cost. Westcore fund shares are not insured by the FDIC, the Federal Reserve Board or any other agency and are subject to investment risk.

²Denver Investments (the "Adviser") has contractually agreed to waive certain investment advisory and/or administration fees and/or to reimburse other expenses from April 30, 2017 until at least April 30, 2018. The first waiver/reimbursement applies so that the ratio of expenses to average net assets, as reported in the Fund's financial statements, will be no more than a fixed percentage for the Fund's Retail Class for such period. Please see the Fund's Prospectus for more information. The second waiver/reimbursement applies so that Fund level Other Expenses (as defined in the Fund's financial statements) for the Institutional Class will be in the same proportion as the Retail Class waivers/reimbursements. The third waiver/reimbursement applies so that the institutional class-specific Other Expenses are reimbursed. The Adviser has contractually agreed to waive/reimburse all of these class-specific Other Expenses, but only to the extent that the difference between the net Institutional Class and net Retail Class expense ratios, after applying the waiver/reimbursement, does not exceed 25 basis points. These agreements may not be terminated or modified prior to April 30, 2018 without the approval of the Board of Trustees.

⁷The ratings allocation reflects the Standard & Poor's equivalent ratings category for the higher credit quality rating assigned by either Standard & Poor's or Moody's. Credit quality does not remove market risk.

Market Overview

The high-yield market's ability to shake off negative headlines and move higher continued in the third quarter. The Bloomberg Barclays U.S. Corporate High Yield Index posted another strong quarter, returning 1.83%. However, its returns by month did not follow a smooth trajectory as it posted solidly positive results in July and September, but took a breather in August. The new issue market remained generally accommodative and year-to-date issuance was up 15% versus the same period last year. The openness of the capital markets and stable fundamentals helped drive the trailing twelve-month high-yield issuer default rate down further in the quarter from 4.43% to 4.00%. Interestingly, when looking at how the different high-yield credit quality indexes performed in the quarter, the difference between the best-performing credit cohort, the Bloomberg Barclay's U.S. Corporate High Yield Caa Index, and the worst-performing credit cohort, the Bloomberg Barclay's U.S. Corporate High Yield B Index, was only 0.59%. This was the lowest differential since the second quarter of 2014 when the high-yield credit spreads reached their post-2008 low. The sector that underperformed most notably this quarter was telecommunications, while the top performer was energy, which was buoyed by the double-digit increase in oil prices during the quarter. Two individual credit stories worth highlighting in the quarter, although the Fund was not invested in them, were Tesla and Toys 'R' Us. Tesla raised \$1.8 billion in the quarter in its inaugural high-yield bond offering. The capital raised will help in funding its continued disruption of the conventional gasoline powered automobile market and, potentially, the power markets in the future. This is noteworthy as Tesla remains in a heavy investment phase and does not currently generate positive free cash flow, which is not the typical profile for a new debt issuer. Toys 'R' Us abruptly filed for bankruptcy in September 2017. To us, this is a cautious reminder that it doesn't take much volatility to push some companies over the edge. To better illustrate this, Toys 'R' Us had a 7.375% coupon bond that was due October 15, 2018, or about 13 months from the beginning of September. It started the month priced at 97.25 (a slight discount to par) and ended the month priced at 32.00, or down a shocking 67%. In our view, robust credit analysis remains critical in the high-yield market.

Fund Performance

The Westcore Flexible Income Fund's 1.58% return for the quarter lagged the 2.01% return recorded by its benchmark, the Barclays U.S. Corporate High Yield Ba Index. The Fund benefited from its positions in the energy sector and single B-rated bonds. These benefits were more than offset by the Fund's positions in investment grade rated bonds, short callable high-yield securities and the telecommunications sector, which ultimately led to its underperformance.

Outlook and Positioning

As investors required less additional yield over Treasuries for credit risk, high-yield credit spreads continued to march tighter in the quarter and are about 0.25% from the post-2008 lows established in mid-2014. Our market view has not meaningfully changed since last quarter. We believe the key drivers of market valuations from here will likely be (1) the speed with which the Federal Reserve normalizes policy, (2) global investor appetite for fixed income assets, (3) results out of Washington D.C., and (4) the pace at which corporate America re-leverages balance sheets. We still generally expect moderate outcomes on each of these fronts, but are positioned appropriately to go on the offensive if dislocations occur and the situation warrants.

We position the Fund with a longer-term investment orientation and an emphasis on higher-quality high-yield bonds, the goal of which is reducing the Fund's volatility while providing solid risk-adjusted returns over time. Our process entails intensive credit analysis by which we evaluate yield versus risk through business cycles, and it follows that a larger weighting of higher-rated, high-yield issues is a logical result. Most importantly, we believe this strategy is suitable over the long term for shareholders who want comparative yield from a high-yield fund, but who are also more sensitive to volatility and more focused on capital preservation.

Past performance does not guarantee future results.

The Manager Commentaries contain certain forward-looking statements about the factors that may affect the performance of the Funds in the future. These statements are based on Fund management's predictions and expectations concerning certain future events and their expected impact on the Funds, such as performance of the economy as a whole and of specific industry sectors, changes in the levels of interest rates, the impact of developing world events, and other factors that may influence the future performance of the Funds. Management believes these forward-looking statements to be reasonable, although they are inherently uncertain and difficult to predict. Actual events may cause adjustments in portfolio management strategies from those currently expected to be employed.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10 year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

THOMSON REUTERS LIPPER FUND AWARD

Source: Lipper, Inc. The Westcore Fixed Income Funds ranked first out of 74 eligible fund families in the Small Fund Group. These funds included the Westcore Flexible Income Fund (WILTX), the Westcore Plus Bond Fund (WIIBX), and the Westcore Colorado Tax-Exempt Fund (WTCOX). The Best Fixed Income—Small Fund Group award is granted to the fund family with the lowest average decile ranking for Consistent Return over the 3-year period. To qualify, a fund family must have at least three fixed income funds and less than \$63.5 billion in assets under management for 2016. Westcore Funds ranked 1 out of 74 eligible companies for 2016.

DEFINITION OF TERMS

Credit Quality: The credit quality of the investments in the Fund's portfolio does not apply to the safety and stability of the Fund and are subject to change. Ratings are assigned by one or more Nationally Recognized Statistical Rating Organizations (NRSRO), such as Standard & Poor's, and typically range from AAA (highest) to D (lowest). When ratings from two NRSROs are available, the lowest rating is used. Bonds not rated by an NRSRO are included in the Not Rated category, which does not necessarily indicate low quality.

Effective Maturity: The date on which a bond, other debt or security is due to be repaid.

Effective Duration: A measure of price sensitivity resulting from changes in the yield of a bond.

REIT: A REIT is a real estate investment trust. REITs are securities that sell like a stock on a major exchange. REITs invest directly in real estate, either through properties or mortgages.

Standard Deviation: A statistical measure of the historical volatility of a fund.

BOND RATING CATEGORIES

AAA: An obligation rated "AAA" (Aaa) has the highest rating assigned by Standard & Poor's (Moody's). The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

AA: An obligation rated "AA" (Aa) differs from the highest rated obligations only in small degree. The obligor's capacity to meet its financial commitment is very strong.

A: An obligation rated "A" (A) is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

BBB: An obligation rated "BBB" (Baa) exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Below BBB: Obligations rated "BB" (Ba), "B" (B), "CCC" (Caa), "CC" (Ca) and "C" (C) are regarded as having significant speculative characteristics. "BB" (Ba) indicates the least degree of speculation and "C" (C) the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

Non-Rated: These bonds are not rated.
